Jose Nunes

PLENO GAMEPLAY ENGINEER

Recife, Brazil (GMT-03)

(+55) 87 9 8104-0612 | contactfrytinhas1910@gmail.com | GitHub | LinkedIn | Fab.com | Portfolio

Summary

Game Developer with 3 years of experience building gameplay systems inside Unreal Engine and Unity, making production-ready projects. Experienced in commercial game projects, PC/Console/Mobile development, global teams, and AI-assisted development.

Technical Skills

Knowledge of C++, C#, Blueprint and Verse;

Portuguese: Native; English: B2

Full flexibility using Unreal Engine, Unity, Rider, VS/VS Code and Android Studio.

Expert in Git/GitHub, Diversion, Subversion and Perforce;

Development Acceleration with Codex & Claude;

Additional experience in debugging, troubleshooting, replication, cybersecurity, game design, and CI/CD.

Work Experience

Poseidon Studios
Bucharest, Romania / Remote

Pleno Gameplay Engineer
Jan. 2026 – June. 2026

- Development of gameplay features for AA Unreal Engine projects using C++, Blueprint, and engine-level systems.
- Implementation of gameplay mechanics, UI, AI, and production-ready gameplay frameworks.
- Collaboration with designers, artists, and engineers to deliver scalable gameplay solutions.
- Technical review of gameplay architecture, feature implementation, and production workflows.

Neo Soft Entertainment
Salvador, Brazil / Remote

Lead Developer & Game Designer
Feb. 2025 - Present

- Leadership of multidisciplinary teams in the development of commercial games and software projects.
- Design of gameplay systems, game mechanics, progression loops, balancing, and feature specifications.
- Architecture of scalable systems using Unreal Engine, Unity, and mobile technologies.
- Project planning, technical decision-making, and AI-assisted development to improve production efficiency.

Junior Software Engineer
Apr. 2024 - Feb. 2025

- Development of games and applications using Unreal Engine, Unity, and Android Studio.
- Implementation of gameplay systems, UI, backend integration, and application features.
- Optimization, debugging, and maintenance of production-ready software across multiple platforms.
- Collaboration with designers and developers to deliver high-quality, documented solutions.

Worldwide
Worldwide / Remote

Freelance Developer
Nov. 2022 - Present

- Development of custom software, games, and gameplay systems for clients across multiple industries.
- Experience with AI, multiplayer networking, matchmaking, anti-cheat, UI, backend integration, and gameplay programming.
- Collaboration with international clients and distributed teams throughout the full development lifecycle.
- Delivery of optimized, documented, and production-ready solutions using multiple engines and technologies.

Relevant Projects

Frontline
Unreal Engine, C++, Blueprint

- Developed multiplayer shooter systems including Game Mode, Game State, weapon logic, grenade logic, team management, scoring, and match phase transitions.
- Development of trailers and core game mechanics, garnering over 14,000 Steam wishlists.
- Implemented authority-based gameplay logic, replication workflows, join-in-progress handling, attacker/defender separation, and mid-match team rules.
- Integrated matchmaking system with EOS alongside the implementation of the Steam API.
- Integrated UI and gameplay flows using Common UI, Gameplay Ability System, Enhanced Input, and replicated gameplay state.

EndZ
Unreal Engine, Blueprint, C++

- Built inventory systems, UI flows, and gameplay logic for a survival-oriented game project.
- Connected game design decisions with technical feasibility across player-facing systems and feature iteration.
- Implemented modular gameplay features designed for maintainability, expansion, and production-oriented iteration.

Universal Inventory System
Unreal Engine, Blueprint, C++

- Created a reusable inventory plugin with modular item handling, extensible gameplay integration, and reduced repeated implementation across projects.

Universal Interaction System
Unreal Engine, Blueprint, C++

- Developed a reusable interaction framework for detecting, validating, and executing player interactions with world objects, UI, and gameplay events.

Universal Economy System
Unreal Engine, Blueprint, C++
- Built a reusable economy framework for currencies, transactions, item pricing, inventory integration, shop flows, and reward systems.

Fries Library
Unreal Engine, Blueprint, C++
- Created a library that optimized average development time by 30% using utility functions.

Imóbi
Android, Android Studio, Mobile UI, App Architecture
- Developed a mobile real estate application focused on property listing, search, map-based discovery, and marketplace flows.
- Designed mobile UI concepts with map-centered navigation, property markers, subscription-based feature access, and listing workflows.
- Structured app features around scalable marketplace behavior including property publishing, extended search radius, and specialized support access.
- Project automation using CI/CD for unit testing and publishing to stores.

Education

Game Development / Software Development
2022 - Present

Self-Directed and Project-Based Training
- Focused training in Unreal Engine, Unity, gameplay programming, systems architecture, C++, Blueprint, UI, networking, and production-oriented game development.
